

AWCTS SYSTEM RELEASE NOTES

Release Date: 19 April 2014

Release Number: v 2.3.0

Release Summary

The 2.3.0 AWCTS release incorporates a variety of fixes and enhancements approved at the AWCTS Change Advisory Board (CAB) Meeting on 05 March 2014.

AWCTS Module: ALL

Fix	Description
Additional Purpose Code Option Added for New Soldier Address	"Parent Unit" has been added to the list of available Purpose Codes for a Soldier address within the Soldier/Relationship Information of all modules.
Session Timeout Extended To 1 Hour	In an effort to minimize potential data loss when users are entering data, the session timeout period has been extended from its current 20 minute limit to a limit of 60 minutes from last detected activity. Additionally, the idle warning dialogue box will now display 5 minutes before the scheduled session timeout.

AWCTS Module: AW2

Fix	Description
Revised AW2 "Case Load" Excel Export	The "Case Load" column has been added to the MS Excel export of the Case Load view within the Cases tab.
Clicking "Case Load Count" Link Now Displays Accurate Case List	The link in the "Case Load Count" column, located on the Case Load tab, now redirects users to the Case List sub-tab and displays only AW2 cases assigned to the Advocate associated with the selected link. Previously, clicking the link returned all AW2 cases.

AWCTS Module: OMB

Fix	Description
New Options for Issues in "Resolved" Status	Issues in the "Resolved" Status will now have the same field options as Issues in a status of "Coordination Complete."
Ability to Edit the "Issue For" Field	Users are now able to edit the Issue For field within an Issue. Previously, this field could not be updated after the Issue was created.

AWCTS Module: WSFH

Fix	Description
Removed "ACOM" from the Assigned ACOM Dropdown Field	The option to select "ACOM" from the Assigned ACOM dropdown field has been removed when editing and adding Issues. Also, the "ACOM" data point was removed from the Issue Workload chart on the Supervisor dashboard.
New "Issue" and "Inquiry" Types for Directory Assistance Categories	When adding an Issue or Inquiry and selecting "Directory Assistance" from the respective Category dropdown, the Type dropdown will now include a "Survey" option.

AWCTS SYSTEM RELEASE NOTES

AWCTS Module: WTU	
Fix	Description
Removed Ability for Select Users to Complete Tasks for Soldiers at Other Units	It was observed that users in certain roles (i.e. CTP MA, SL, NCM) have been able to complete role-appropriate tasks for Soldiers outside of the users' respective units. System security policy has been rectified so that a user will now only be able to complete tasks for Soldiers within the user's current unit.
Improvements to the Bulk Reassignment Capability	Soldiers can no longer be bulk reassigned to an inactive user.
	For roles that can be assigned at either the unit OR company level (i.e. NCM, OT, SW), the Bulk Reassignment tool will now include in the "Assign To" dropdown list users assigned at both the Soldier's company and unit levels. Example: When bulk reassigning the NCM for a group of Soldiers in A CO, the "Assign To" dropdown will now include NCMs assigned either to A CO specifically OR to the Soldier's unit without having specific company assignment.
	"SW" and "OT" columns have replaced the "PCM" column in the Soldier list.
	The Bulk Reassignment tool can now be used to reassign Soldiers from a user who is either inactive or no longer with the unit. Example: If an NCM out-processes from the unit, the Bulk Reassignment tool can now be used to reassign all of the Soldiers previously assigned to the out-processed NCM to a different NCM who is still active at the unit.
New Report Type Toggle	When selecting Soldiers to be reassigned, users can now use a "Select All" checkbox to quickly select all Soldiers in the list.
	On the Reports page, a toggle has been added that allows users to filter the list to show only reports of a specific type. Users can toggle between ALL, ADHOC and SYSTEM, allowing users to quickly view the reports they are most interested in.
"Refer to AW2" Button Removed	The capability to refer a Soldier to an AW2 Advocate using the "Refer to AW2" button has been removed from the Soldier Case Assignment page. In accordance with FRAGO 09 to OPORD 11-10, AW2 referrals should now be completed through use of an Action Item.
Additional Manual Appointment Types Now Available	When adding or editing a Manual Appointment, the Type dropdown now includes the following new options: "Phase II Goal Setting," "Off Post Testing," "Off Post Medical," "Off Post Surgical/Surgery," and "Dental."
